The Business Problem — Clinic Appointments, Week 2

Stakeholder

Dr. Femi Okonkwo, Practice Manager, Willowbrook General Practice

His Request This Week

"Thanks for cleaning up the appointment log last week — I can finally trust the numbers. Now I need to actually act on it. First, I need to know each department's current wait time and weekly capacity without cross-checking a separate spreadsheet every time. Second, I need a simple view I can check before the partners' meeting: missed appointments by department, and which departments are over capacity."

Why It Matters

Dr. Okonkwo will use this to decide where to add clinic capacity. A lookup that quietly breaks, or a dashboard that hides an overloaded department, means the wrong decision gets made with confidence.

This Week's Task

Use XLOOKUP or VLOOKUP to pull each department's current wait time and weekly capacity into the cleaned appointment log from the new Department Directory tab, then build a PivotTable and a simple dashboard view that answers Dr. Okonkwo's two questions. Full task details are on the 'Assignment Brief' tab.

This is your independent version of the same pattern worked through live in Session 2 — a different stakeholder, a different dataset, the same two tools working together: lookup, then summarize.

Week 2 Assignment — XLOOKUP/VLOOKUP, PivotTables & a Simple Dashboard

Dataset: Clinic Appointments (already cleaned) + Department Directory (Sheets 3–4)

Time expectation: 2–3 hours

Background

The Clinic Appointments sheet is the cleaned version of the dataset you worked on in Week 1 — duplicates removed, text standardized, dates and costs converted to real numbers. A new tab, Department Directory, has been added: a small reference table you'll look up into.

Tasks

1. Using XLOOKUP (or VLOOKUP), add two new columns to Clinic Appointments: Current Wait Time (Days) and Weekly Capacity, pulled from Department Directory by matching on Department.

2. Some Department cells are still blank — decide how your lookup formula should handle that (hint: IFERROR or IFNA) rather than letting it show #N/A.

3. Build a PivotTable: total appointments and missed appointments (Attended = No) by Department.

4. Add one more PivotTable or PivotChart: which departments currently have more scheduled appointments than their Weekly Capacity suggests they should?

5. Arrange your PivotTables/Charts into a simple one-sheet dashboard — something Dr. Okonkwo could glance at before a meeting.

6. Using formulas, answer: which department has the longest current wait time, and how many missed appointments does it have?

Deliverable

Your workbook with the lookup columns added, at least one PivotTable-based dashboard sheet, and a short written note (3–5 sentences) on the 'Notes' tab explaining what the dashboard shows and what you'd tell Dr. Okonkwo first.

PatientID	Patient Name	Gender	Age	Appointment Date	Department	Visit Type	Attended	Cost

Dashboard Notes

Write 3-5 sentences here explaining what your dashboard shows and what you'd tell Dr. Okonkwo first.

The first Dashboard highlights missed appointments across departments, while the second identifies departments where scheduled appointments exceed their weekly capacity. Cardiology and Dermatology have the longest waiting times, making them important areas to review. I would advise Dr. Okonkwo to prioritise these departments, review their appointment demand and capacity, and investigate missed appointments to identify opportunities to improve patient access and reduce waiting times.
